Warning

NEVER OPEN THE CASE

• Never try to remove the bottom cover and to modify the equipment. (Internal components of the equipment use high voltages, and exposing them creates the danger of fire and electrical shock.)

STOP THE USE IN CASE OF A PROBLEM

• Stop using the equipment whenever you notice smoke or a strange odor coming from it.
• Contact your original dealer or nearest authorized service provider for service.

Warning

BEWARE OF HEAT BUILT UP

• Never cover AC adaptor with cloth or other objects.
(Built up heat creates the danger of the equipment deformation and fire.)

Caution

USE SPECIFIED AC ADAPTOR ONLY

• Be sure to use only the AC adaptor specified in this User's Guide. Use of non-specified AC adaptors creates the danger of fire and electrical shock.

UNPLUGGING AC ADAPTOR

• Never try to unplug AC adaptor while your hands are wet. Doing so creates the danger of electrical shock.
• When unplugging AC adaptor from the power source, be sure to grasp the adaptor. Never pull on the cord. Doing so can damage the power cord and create the danger of fire and electrical shock.

WATER, HUMIDITY, DUST AND HIGH TEMPERATURES

• Never leave or use the equipment in bathrooms, the outdoors or other areas subject to water, high humidity, dust and high temperature. Doing so creates the danger of fire and electrical shock.

LEAVING THE EQUIPMENT UNATTENDED

• Whenever leaving the equipment unattended for long periods, be sure to unplug AC adaptor from the power source. If not, there is a danger of fire.

OD-9 Overdrive

- Identical to the original circuit and featuring the JRC4558 IC chip, the OD-9 produces natural overdrive of a tube amp that smoothly responds to input signal level (playing dynamics).
- Easy-access, no tools battery compartment.
- AC jack to connect optional AC adaptor for long hours of continuous use.

FEATURES AND CONTROLS

① IN (input jack)

Input jack to connect to the output of guitar, other effects or related equipment. The product automatically turns on when a plug is inserted into this jack. When not in use, disconnect plug from input jack to preserve battery life.

* When an external AC adaptor supplies DC power to this product, the power is always on and battery is preserved regardless of input jack connection.

② OUT (output jack)

Output jack to connect to input of amplifier or other effects.

③ DRIVE

This controls overdrive level. Turn it clockwise for more overdrive.

- True Bypass Switching lets your instrument's signal pass through a non-electronic bypass line when the effect is disengaged, feeding your amp with direct, unaltered signal from your instrument. Low noise mechanical switch is used for effect/normal switching.
- LED to indicate normal/effect and battery condition for trouble-free performance.

④ TONE

This controls the amount of high frequencies. Turn it clockwise for more treble and counterclockwise for less treble.

⑤ LEVEL

This controls output level of effected signal. Typically output levels of both normal signal and effected signal should be adjusted to equal levels.

⑥ FOOTSWITCH

Switch for effect on/off. Stepping on this switch alternately turns effects on and off.

* Effect turns on when you depress the switch and effect turns off when you depress and release the switch.

⑦ LED INDICATOR

This indicates the normal/effect status and battery condition. It lights when plug is inserted to input jack and effect is on. No LED light indicates the battery is low or not installed. In this case replace the battery.

⑧ DC IN (power input jack)

A jack for connection of external power supply to effect. Be sure to use the correct Maxon AC adaptor.

 Turn down amplifier's volume to the minimum before connecting AC adaptor to the product in order not to damage other connected equipment.

AF-9 Auto Filter

- Fat sound auto-wah equipped with photo coupler. Five controls packed in a compact body allow various filter effects.
- Easy-access, no tools battery compartment.
- A jack to connect optional AC adaptor for long hours of continuous use.

FEATURES AND CONTROLS

Before each control's description, auto filter's basic function is explained below by contrast with an ordinary wah pedal:

A wah pedal shifts the band pass filter's center frequency up and down by moving a pedal volume that is geared to a potentiometer to produce wah effects.

With auto filter, an electronic circuit comes in place of the potentiometer and converts input signal's volume into voltage to control VCF (Voltage Controlled Filter), allowing automatic wah effects in response to tonal volume of input signal. And auto filter has HPF (High Pass Filter) and LPF (Low Pass Filter) for additional effects that you can't get with ordinary wah pedal.

Refer to OD-9 pages for ①, ②, ⑧, ⑨ and ⑩.

- ① IN (input jack)
- ② OUT (output jack)

- True Bypass Switching lets your instrument's signal pass through a non-electronic bypass line when the effect is disengaged, feeding your amp with direct, unaltered signal from your instrument. Low noise mechanical switch is used for effect/normal switching.
- LED to indicate normal/effect and battery condition for trouble-free performance.

③ SENSITIVITY

This adjusts sensitivity with which instrument's volume is converted to the voltage that controls VCF. The degree of auto filter effect is subject to your instrument's output volume and your playing touch. Adjust sensitivity to your taste. With your playing touch at a fixed level, sliding this volume upward provides wider range of filtered frequencies just as a pedal volume on ordinary wah pedal does.

④ PEAK

This boosts the center frequency to accentuate wah effects as VCF's resonance does for synthesizer. Slide this volume upward for more peak. Too much peak may distort your instrument's signal, depending on how much input sensitivity your amplifier has.

⑤ FILTER MODE - HP/BP/LP

This is a filter mode switch. LP (Low Pass filter) cuts out high frequencies.

BP (BandPass filter) cuts out both high and low frequencies, only leaving the center frequency. HP (High Pass filter) cuts out low frequencies.

⑥ DRIVE MODE - UP/DOWN

This decides whether the center frequency moves up or down. The center frequency moves up in UP mode and moves down in DOWN mode when input signal exceeds a specified threshold level. UP is like a wah pedal with its pedal volume horizontal and DOWN is like that with the volume sloped

⑦ RANGE MODE - HIGH/LOW

This switches the frequency range to be filtered between high (200Hz - 4 kHz) and low (100Hz - 2 kHz). Better to play bass guitar in RANGE LOW mode.

BATTERY REPLACEMENT

BATTERY REPLACEMENT

This product operates on one 9V battery (6F22). Follow the procedures below to replace batteries:

* Be sure the battery is firmly connected to battery snap with the correct polarities.

ATTENTION:

- Turn down the volume of effect and amplifier to the minimum before connecting Maxon effects to guitar, amplifier or other effects in order not to damage other connected equipment by unintended noise.
- When not in use, disconnect plug from input jack to preserve battery.
- Take out the battery if the product is not used for a long period of time.
- No or dark LED light indicates the battery is low or not installed. In this case replace the battery to avoid poor effect or distorted signal.
- Be sure to use the correct Maxon AC adaptor. Use of any other adaptor may cause trouble.
- Do not try to remove screws.
